Regex i Pyth0n

andrekaa@ulrik.uio.no tobiaaa@ulrik.uio.no

>>> import re

```
#!/usr/bin/env python
2
    import re
3
4
    # Oppgave 1.
5
6
    svar = 'ok'
7
8
   print("oppgave 1 er", svar)
9
10
    # Oppgave 2.
11
12
    osv = ''
13
14
    # Slutt
15
```

```
- search(), findall(), sub() & split()
```

```
Assen sjekke om en regex matcher:

>>> s = 'verdenshistoria'

>>> if re.search(r'n.h', s):

...: print('match')
```

...: match

match

- search(), findall(), sub() & split()

Åssen finne og returnere alt regexen matcher:

```
>>> s = 'verdenshistoria'
>>> re.findall(r'[aeiou]', s)
['e', 'e', 'i', 'o', 'i', 'a']
```

```
- search(), findall(), sub() & split()
```

Åssen erstatte om et regex matcher:

```
>>> s = 'verdenshistoria'
>>> re.sub(r'a', 'en', s)
>>> print(s)
verdenshistorien
```

- search(), findall(), sub() & split()

Åssen splitte om et regex matcher:

```
>>> s = 'Can eagles that fly swim?'
>>> s_set = re.split(r'\s', s):
>>> print(s_set)
['Can', 'eagles', 'that', 'fly', 'swim?']
```
